

This work was part of an effort to create a new client-requested feature to facilitate file uploads into a legacy business banking application. The working boards, flows and wireframes give a sense of the work without revealing any proprietary information.

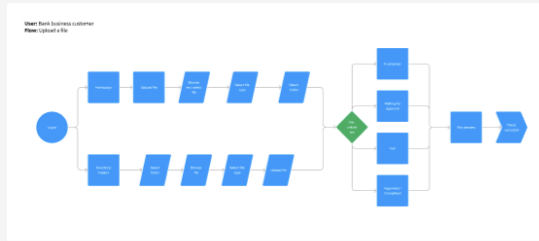

Flowchart - initial

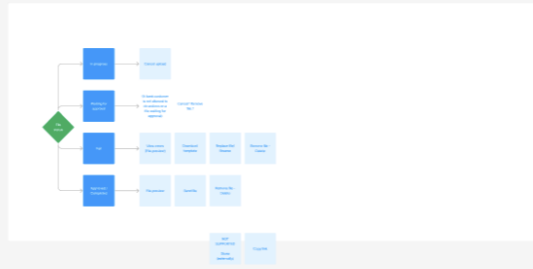

Primary User Problem to Solve (I think):
User wants to take action in their Business Banking Application (D1B) on a file from another financial/accounting system.

User flow - Upload file (Bank business customer)

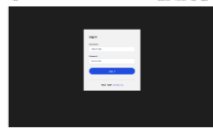

Actions a Bank business customer could do on a file

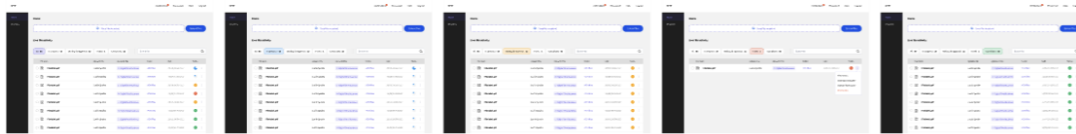

Wireframes - Upload files
